

Description

The tank of 10 m³ is suitable for transporting and distributing of drinking water. The tank is made of 4 mm stainless steel and has three inspection hatches. With hook lift frame, it is easy to pick up for the truck and 5 baffles means that the tank does not affect the truck's properties during transport.

Possibilities for mounting pumps as well as electrical cabinets make the tank perfect for connecting to buildings' network. All pumps and electrical cabinets are delivered with a start manual for easy handling in crisis situations. Equipment for the winter can also be installed, such as an electric heating element, circulation pump and isolation cover.
