

Shower and latrine solution

DESCRIPTION

The **VacuSan™** is a sanitation solution for staff camps, field hospitals and any situation where a reliable, modular and portable system is required.

Features include a stainless-steel hand-washing basin which is operated via foot-pedal, lights with motion detectors in each cubicle and water-efficient shower heads to reduce consumption. The cubicles are made of flexible, rugged and easy-to-clean materials, which makes them a breeze to set up or take down.

A protected dry space for clothes and personal items is provided inside the shower cubicles, so the user can change away from prying eyes without the need for the provision of any additional screens around the shower area.

DEPLOYMENT

The basic **VacuSan™** (2 latrines + 2 showers) comes with a chassis that holds the vacuum chamber, pumps and automated control panel and with tanks, hoses and accessories. Everything ships on three air-freight-ready standard pallets. The unit runs on mains-current (220V) or a generator (not included).

AVAILABLE OPTIONS

The unit is scalable through the **VacuSan™ Expansion Kit** (additional 2 latrines + 2 showers). The chassis of the basic unit is powerful enough to handle up to 8 latrines (or 16 with an additional vacuum pump).

For use in hospitals or in the response to outbreaks of contagious diseases (such as cholera), please enquire about the **Hygieniser 100™** for pre-treatment of the sludge for safe disposal.
